

Master in Epigenetics, Genetics and Cell Biology

11th IGH WORKSHOP ON EPIGENETICS
Genopolys, Montpellier, November 03-10, 2025**Organizers: Charlène Boumendil & Giacomo Cavalli** - Institute of Human Genetics - Montpellier, FR

This one-week workshop aims to introduce the various aspects of epigenetic research via a highly interactive approach that will engage the students in lively discussions with a set of invited speakers chosen among the world leaders in the field. Students will go deep in the research topics of the speakers by combining mentored analysis of their published work with first hand private discussions with the speakers after an open seminar. While one day will be devoted to presentation of careers in academia, we will dedicate a full day to discussing alternative paths in scientific publishing in scientific writing. This year, we will focus on how the epigenome and nuclear architecture are regulated in response to DNA damage, mechanical stress and during developmental processes.
